Graduating Class of 2020

THE NEXT STEP: During this pandemic I have figured out a lot about myself. Here are some things that I plan on doing. I am going to attend SLCC this next coming school year to study Civil/Environmental Engineering. I will also take a couple music classes along with my generals. I am going to continue progressing in guitar along with many more outdoor activities. Along with all this I hope to be able to get a Part/Full time job to get a new car.

SLCSE AND ME: Being a part of the SLCSE community has changed me as a person in many amazing ways. Something that will always stick with me is the saying “Fail Forward”. Because sometimes life kinda feels

like a series of punches to the face. Then just when you think it would stop, it punches you again. With that being said, everything that happens to me I just try to take it as an experience, to help shape the person I am going to be in the future.

TEACHER IMPACT STATEMENT: I would like to write this statement to give a shout out Mrs. Haakenson. Through the years of knowing her she has been a very influential and inspiring person in my life. She has inspired me to one day have a perfected schedule, and work ethic like her. The many informational weeks that I have spent in her classes has brought me. The most relevant information that will really help me succeed as a functioning member of society. The school trips that she organized and attended are some of the most memorable trips that I will ever have.

SLCSE MEMORY: In the 11th grade my class and I went to Washington D.C to go and see many museums and sightseeing spots. It was one of the most amazing things that I have ever done. Because of this COVID-19 situation the 11th graders, our now to be seniors could not go this year. I just wanted to address this because I hope they can find a way to make it work, because they earned it..

SENIOR PROJECT: Throughout the year I have been studying transpotational engineering I have found it very intriguing as a career. Because of this I am choosing to go into Civil engineering. Due to the COVID-19 pandemic I will be doing a different project on how the corona virus has helped me find the inner passion for Photo/ regular journalism. I have written in this jornal almost everyday since the lockdown started.
